## SOUTH GREENLAND

### South Greenland as a mining destination

South Greenland has many years of experience with mineral exploration. The geology is well mapped, and a large amount of public data is available for companies and investors.

Mining activities in Greenland are regulated by clear rules set by the Government of Greenland. Licensing procedures are transparent, and requirements related to permits and environment are well defined. This creates a predictable framework for project development.

The region has basic infrastructure, including ports, airport and local service companies. South Greenland is also located close to North Atlantic shipping routes.

We help companies get a clear picture of South Greenland before and during project development. Early dialogue and good coordination can reduce misunderstandings and delays.

#### **What Innovation South Greenland offers**

Innovation South Greenland is a regional development organization that supports business activities in South Greenland. We act as a local point of contact for companies interested in activities in South Greenland.

#### **We can support companies with:**

- Local knowledge of South Greenland
- Contact to municipalities and key stakeholders
- Dialogue with local communities and businesses
- Insight into local workforce and service providers
- General understanding of other regional interests

Innovation South Greenland does not provide financial support. Our role is to share knowledge, support dialogue, and help companies understand local conditions.
