

CHARTERING

Royal Arctic Line vessels are designed for operating under difficult conditions. And our crew is always up to the task.

Royal Arctic Line's vessels are designed for the conditions of the Arctic.

Our vessels can be chartered for all different tasks involving sailing in ice filled Arctic and Antarctic waters.

Based on our extensive knowledge in navigating the Arctics and sailing in ice filled waters, Royal Arctic Line also offers a variety of consultancy services for customers looking for a professional and trustworthy partner.

We offer consultants such as

- Ice pilots
- Logistics support
- Education and training
- Arctic waters charter

EXPERTS OPERATING under arctic conditions

Royal Arctic Lines modern vessels are built to work under the harsh conditions of the arctic seas where ice fields and icebergs are among the obstacles

Base supply to the mining industry

The search for minerals often brings the industry to remote areas without infrastructure.

In Greenland, Royal Arctic Line are used to operate under such demanding conditions and serve customers in this growing business.

Our dedicated staff more than any understands the importance of delivery on time.

We provide a full range of logistics services and the transportation which is required to keep your base running 24/7.

Handling and shipment of project cargo is a big part of our core business.

Throughout many years of sailing in Greenlandic waters we have obtained great experience.

We offer our customers adequate knowledge, capacity and flexibility in our total transport solutions from factory to site.
